PROFESSIONAL SUMMARY

Information Security graduate (SAIT, 2026) with five years of enterprise IT operations experience at Canadian Pacific Kansas City Railway — administering Active Directory, managing incidents in a 24/7 high-availability environment, and working within ITIL frameworks. Hands-on training in digital forensics, malware analysis, threat detection, and SIEM operations, complemented by a Business Administration background that grounds security decisions in risk, compliance, and organizational impact. Ready to contribute across detection, investigation, and response workstreams from day one.

PROFESSIONAL EXPERIENCE

Service Desk Analyst / Service Operations Centre

Canadian Pacific Kansas City Railway | 2017 –2022

- Delivered T1/T2 technical support across a large distributed enterprise, triaging and resolving incidents end-to-end within SLA targets.
- Monitored server health and infrastructure availability in a 24/7 high-availability rail operations environment; managed and escalated major incidents.
- Administered Active Directory — user account lifecycle, access provisioning, and group management — enforcing access control across a large workforce.
- Oversaw batch job scheduling and execution monitoring through Control-M; identified failures and coordinated timely remediation with infrastructure teams.
- Operated within ITIL-aligned incident and change management workflows, maintaining documentation, ticket quality, and SLA adherence throughout.
- Bridged communication between end-user support and backend infrastructure teams, developing cross-functional coordination skills applicable to SOC escalation paths.

SECURITY PROJECTS

Active Directory Security Lab

- Co-built a Python/PowerShell automation tool simulating enterprise AD user lifecycle management; enforced RBAC least-privilege by auditing group memberships against defined role baselines and flagging excess permissions. All changes logged to a traceable audit trail.

ISOReady — ISO 27001 Implementation Methodology

- Co-developed a structured ISO/IEC 27001 ISMS adoption methodology, analyzing all Annex A controls against real operational contexts. Produced governance documentation covering incident response, security monitoring, business continuity, and secure SDLC — mapped to audit evidence requirements.

Security Labs & Applied Coursework

- Completed hands-on labs spanning exploit development, network simulation, malware analysis, forensic investigation, and red team exercises across rotating fresh-machine environments requiring independent reconnaissance.
- Solved a mid-term exploitation challenge via an unintended attack path, reaching the root flag without conventional privilege escalation — an approach not anticipated by the instructor.
- Scripting and tooling work included Python and PowerShell automation, Wireshark-based traffic analysis, and practical use of offensive and forensic toolchains.

LEADERSHIP & ACTIVITIES

Student Lead — ‘Hack the Planet’ CTF Event, SAIT | Winter 2026

- Coordinated volunteer teams across multiple workstreams to deliver SAIT’s student-run CTF competition on schedule; facilitated weekly syncs, aligned priorities, and served as primary liaison between team leads.

CTF Competitor — SAIT Trojans CTF Team | Founding Member

- Placed top 3 at SAIT’s Squidgame CTF (Winter 2025) and Alice in Wonderland CTF (Fall 2025). Founding member of the SAIT Trojans competitive CTF team.

EDUCATION

Information Security Diploma · Southern Alberta Institute of Technology · 2024 –2026

Business Administration — Finance Diploma · Southern Alberta Institute of Technology · 2015 –2017

TECHNICAL SKILLS & TOOLS

Security Operations Splunk, Microsoft Sentinel, Sysmon, Event Viewer, SIEM concepts

DFIR & Forensics Autopsy, FTK, Volatility, YARA, Wireshark, SIFT Workstation, tcpdump

Malware Analysis Ghidra, IDA Free, Binary Ninja, PEStudio, Binwalk, Strings, FLARE VM

Penetration Testing Metasploit, Burp Suite, Nmap, Netcat, Hydra, John the Ripper, Hashcat, ExploitDB

Networking Wireshark, Nmap, Nessus, Aircrack-ng, Kismet, tcpdump

Identity & AD Active Directory, Group Policy (GPO), Azure AD (Entra ID)

Scripting Python, PowerShell, Bash/Shell, C, C++, Assembly (x86/x64)

Compliance & GRC ISO/IEC 27001:2022, PCI DSS, Canadian legal frameworks, risk assessment

OS & Virtualisation Kali Linux, Parrot OS, Windows Server, Ubuntu/Debian, VMware, VirtualBox

ITSM & Collaboration ServiceNow, Control-M, Git/GitHub, VS Code
