SUMMARY

Information Security graduate with five years of enterprise IT operations experience at Canadian Pacific Kansas City Railway, supporting 24/7 mission-critical infrastructure. Hands-on background in penetration testing, vulnerability assessment, and ethical hacking, with applied training in threat detection, malware analysis, social engineering, and web application security. Proven ability to document and communicate technical findings to both technical and non-technical audiences. Business Administration foundation supports risk-based prioritization and alignment with business objectives, bridging offensive security work with organizational impact

EDUCATION

Southern Alberta Institute of Technology (SAIT), Calgary, AB 2025 - 2026

Diploma, Information Security

Relevant Coursework: Computer Forensics, Malware Analysis, Computer System Exploitation, Application Security, Wireless Security, Security Policies & Operations, PCI Compliance & Encryption, Social Engineering, Scripting for Tool Construction

Southern Alberta Institute of Technology (SAIT), Calgary, AB 2015 - 2017

Diploma, Business Administration - Finance

PROFESSIONAL EXPERIENCE

Canadian Pacific Kansas City Railway, Service Desk Analyst / Service Operation Center, Calgary, AB 2017 - 2022

- Served as first point of contact for end-users via phone and chat, managing full ticket lifecycle from triage through resolution in an ITIL-aligned environment
- Delivered T1/T2 enterprise technical support across a large, distributed transportation organization, resolving Windows system, access, and software incidents
- Monitored server and infrastructure health across a 24/7 high-availability environment, escalating major incidents and coordinating remediation with infrastructure and engineering teams
- Administered Active Directory accounts including access provisioning, lifecycle management, and account troubleshooting at enterprise scale
- Oversaw batch job scheduling and execution monitoring via Control-M, identifying failures and coordinating timely remediation
- Maintained SLA adherence and thorough incident documentation, bridging communication between end-user support and backend infrastructure teams

PROJECTS

ISOReady - ISO 27001 Implementation Methodology

- Co-developed a structured ISO/IEC 27001 implementation methodology to guide organizations through ISMS adoption, analyzing all Annex A controls against real operational contexts
- Produced documentation covering incident response, security monitoring, business continuity, and secure SDLC practices, with controls mapped to audit evidence and compliance validation methods using a cloud based company as our example

Active Directory Security Lab

- Collaborated on a Python/PowerShell automation tool managing the full AD user lifecycle in a simulated enterprise environment, enforcing least-privilege through role-based group auditing
- Generated traceable audit logs for all tool actions, reflecting real IAM practices around RBAC, access provisioning, and change documentation

Security Labs & Hands-On Coursework

- Completed applied labs across exploit development, network simulation, malware analysis, forensic investigation, and red team exercises - working from fresh environments each session without carry-over knowledge
- Solved a mid-term exploitation challenge via an unintended attack path to root without conventional privilege escalation, a technique not anticipated by the instructor
- Performed Windows event log analysis and SIEM-based alert triage (Splunk, Microsoft Sentinel) to investigate simulated endpoint compromises and map findings to MITRE ATT&CK techniques

LEADERSHIP & ACTIVITIES

Student Lead - Hack the Planet CTF Event, SAIT

Winter 2026

- Led a school-run Capture the Flag competition as student lead, coordinating volunteer teams across multiple workstreams to deliver the event on schedule
- Facilitated weekly meetings, tracked cross-team progress, and served as primary liaison to resolve blockers and keep priorities aligned

Capture the Flag (CTF) Competitions - SAIT Trojans

- Founding member of SAIT Trojans CTF team; placed top 3 at SAIT's Squidgame CTF (Winter 2025) and Alice in Wonderland CTF (Fall 2025)

SAIT Cyber Range Activities

- Conducted log correlation and threat detection exercises using SIEM, and Nessus in SAIT's live cyber range, identifying simulated indicators of compromise across network and endpoint telemetry

SKILLS

- *Security & Offensive:* Penetration testing, exploitation, malware analysis & reverse engineering, social engineering, web & application security, wireless security
- *Forensics & Compliance:* Computer forensics, incident investigation, PCI compliance, ISO/IEC 27001:2022, Canadian legal frameworks, security policies & operations, CVE/CVSS Analysis
- *Systems & Administration:* Windows Server, Active Directory & IAM, Group Policy (GPO), Azure AD (Entra ID), scripting & automation (Python, PowerShell, Bash)
- *Security Tools:* Metasploit, Burp Suite, Nmap, Ghidra, IDA Free, Volatility, Autopsy, FTK, Wireshark, YARA, Splunk, Microsoft Sentinel, Sysmon, Nessus, SIEM
- *Environments & Platforms:* Kali Linux, Parrot OS, FLARE VM, SIFT Workstation, VMware/VirtualBox, Windows Server
- *Vulnerability Management & Assessment:* Vulnerability scanning & enumeration, CVE/CVSS risk scoring, patch prioritization, remediation tracking, attack surface reduction, threat modeling, security hardening
- *Penetration testing & ethical hacking,* vulnerability assessment & risk prioritization, exploitation, social engineering & physical security assessments, web & application security, wireless security, malware analysis & reverse engineering
- *Soft Skills:* Technical communication & reporting, professional presentation, cross-functional collaboration, ITIL incident management
